

React Environment

LEXICON

Installation Steps

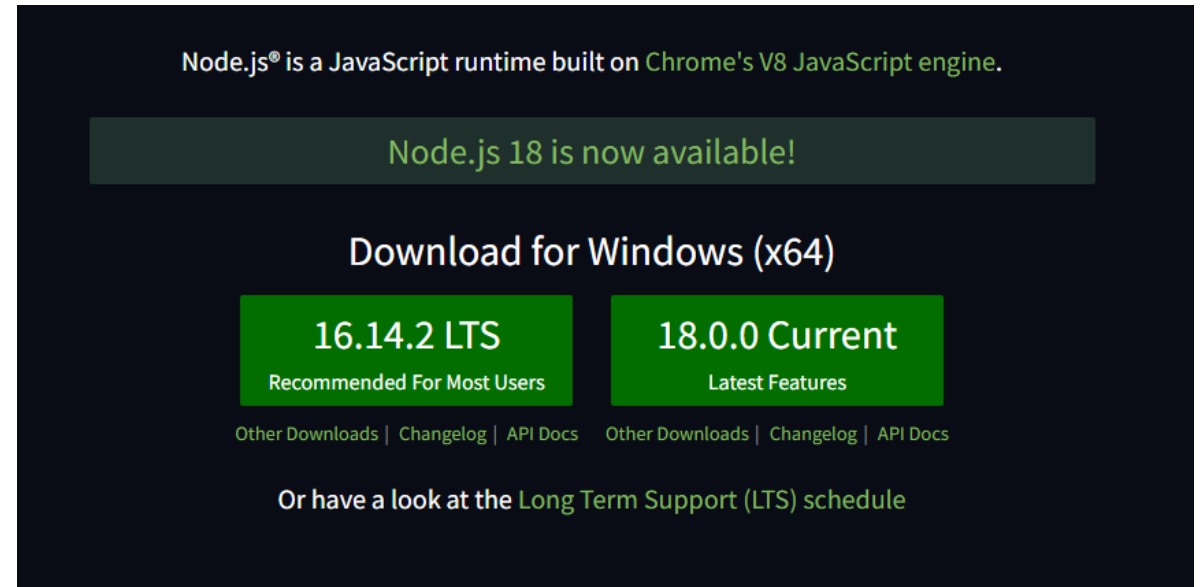

- Install Node.js and npm *(p 3-7)*
- Install Git CLI *(p 8-12)*
- Install Visual Studio Code (VS Code) *(p 13-15)*
- Install useful VS Code Extensions for React Developers *(p 16)*
- add useful browser Extension for React Developers *(p 17)*
- Create and Run a React Application *(p 18)*

Install Node.js and npm

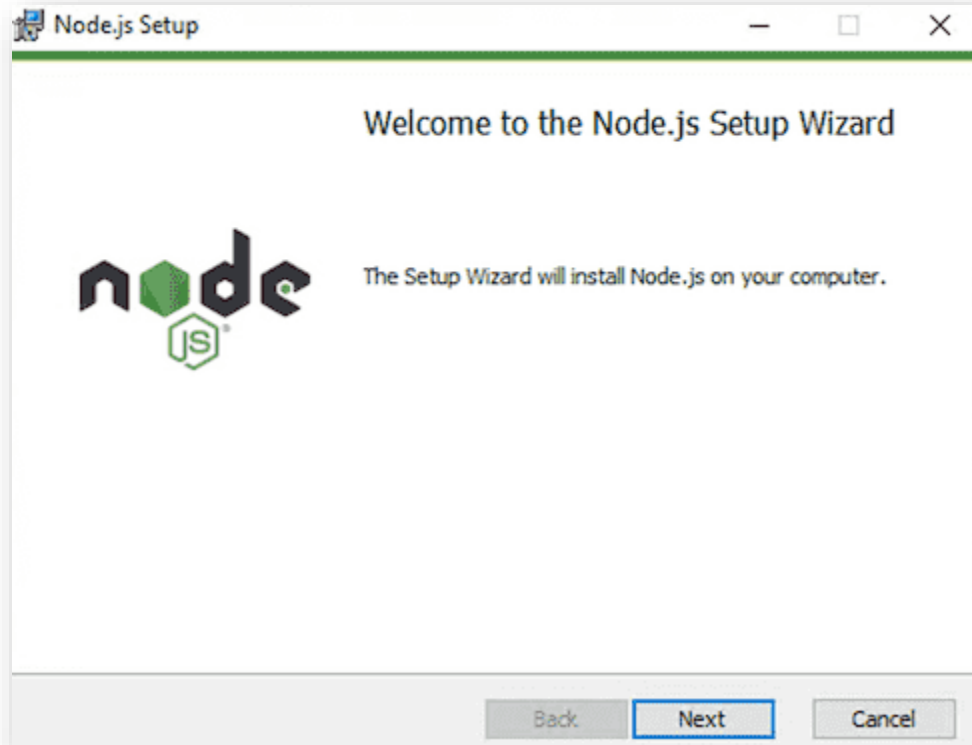

- **Node.js** and **npm** are the runtime and CLI tools required to build and run React applications
- **Node.js** is a JavaScript runtime environment that enables developer to run **JavaScript** codes
- **npm** stands for node package manager and it is a tools for installing node packages

Download latest LTS version

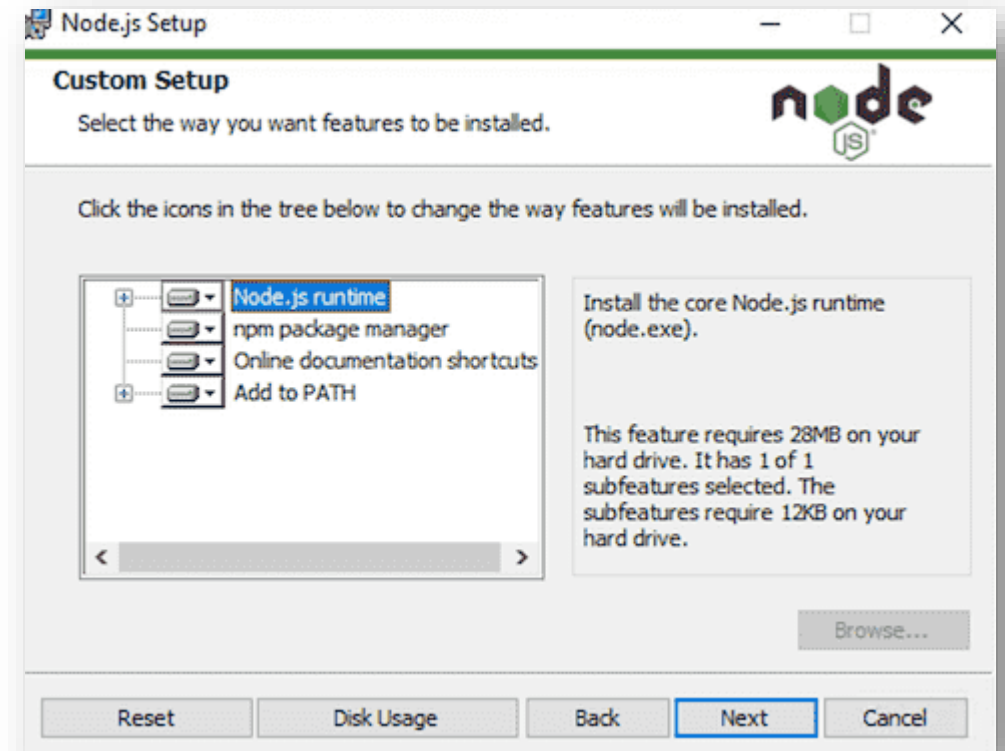

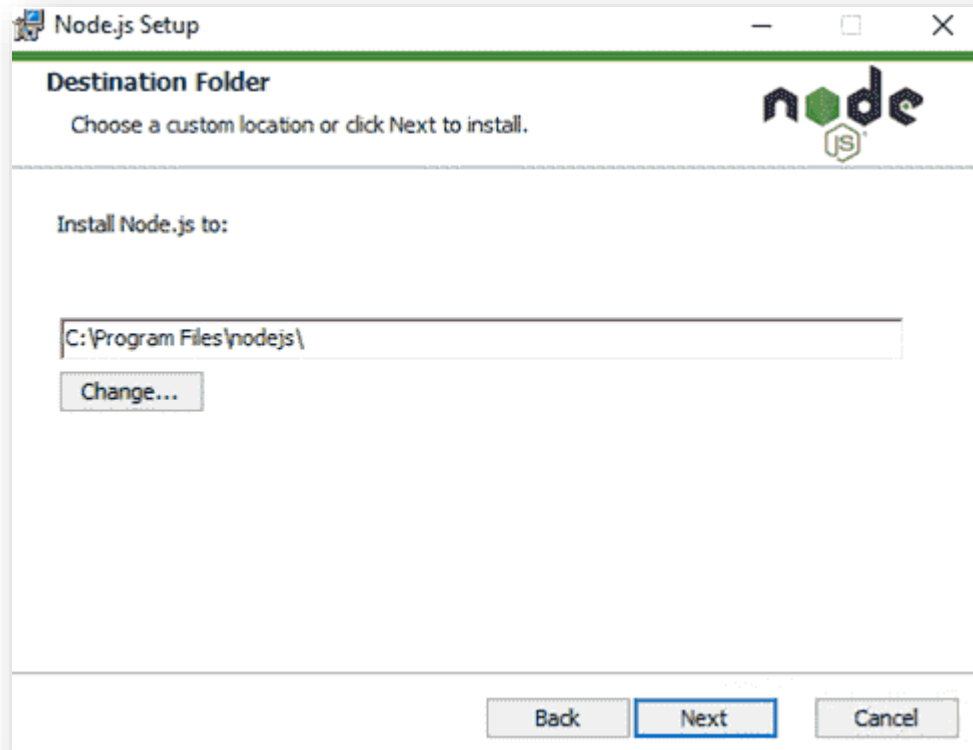

Node.js and npm: <https://nodejs.org>

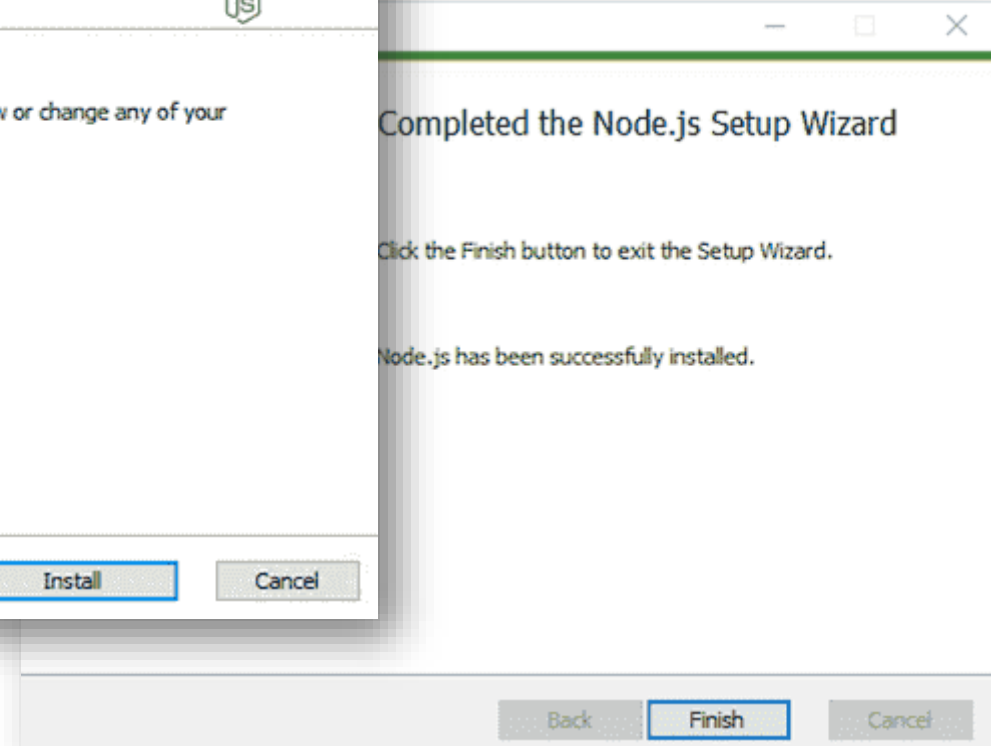

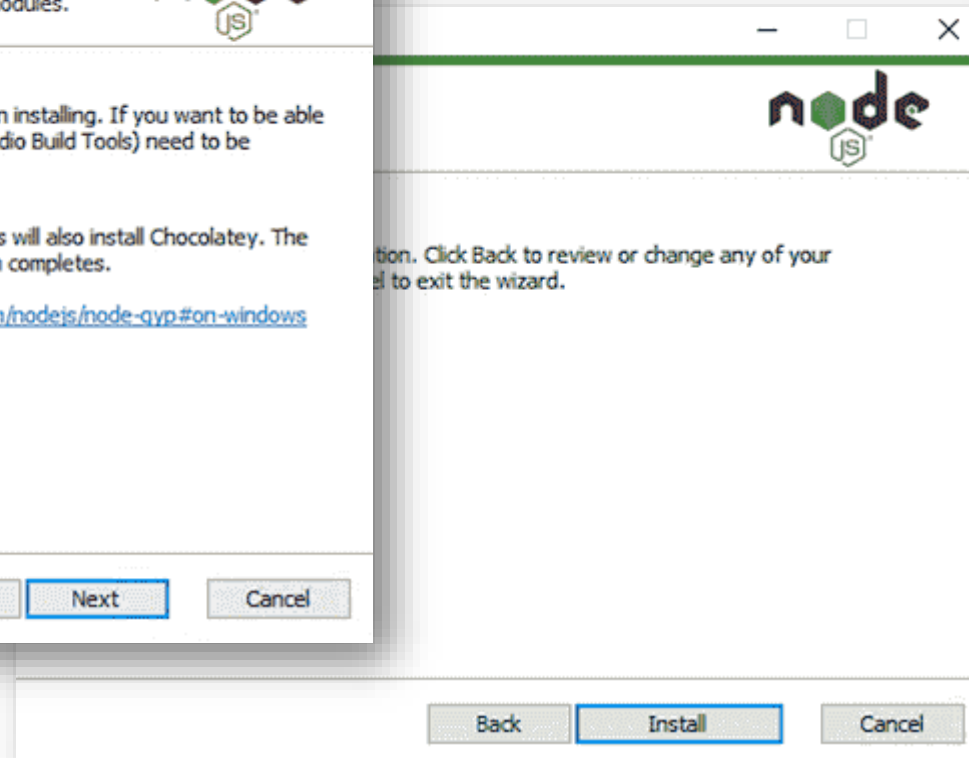

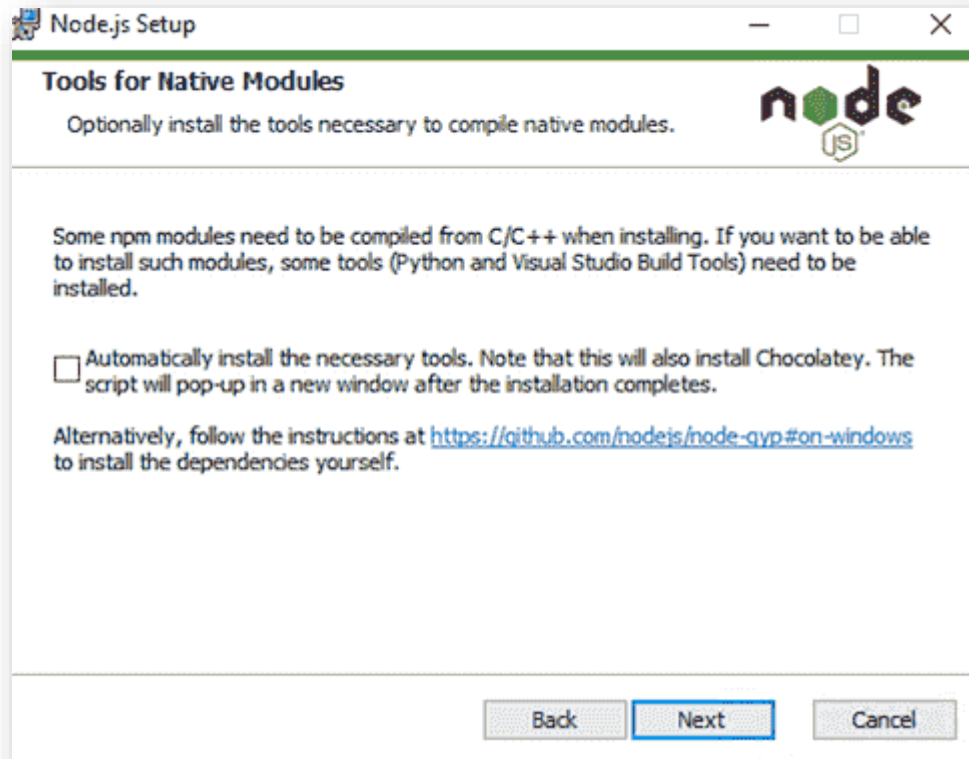

Install Node.js and npm

Install Node.js and npm

Install Node.js and npm

Install Node.js and npm

- Test Nodejs and npm version: `node -v` and `npm -v`

```
C:\WINDOWS\system32\cmd.exe
Microsoft Windows [Version 10.0.22471.1000]
(c) Microsoft Corporation. All rights reserved.

C:\Users\Teacher>node -v
v14.15.4

C:\Users\Teacher>npm -v
6.14.10

C:\Users\Teacher>
```

Install Git CLI

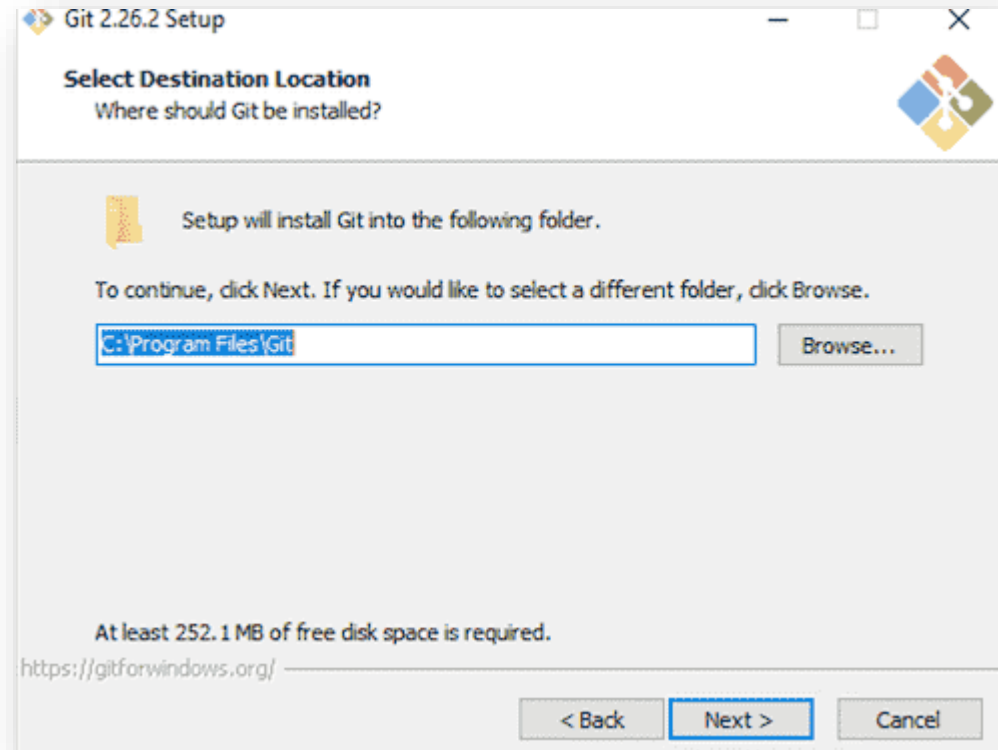

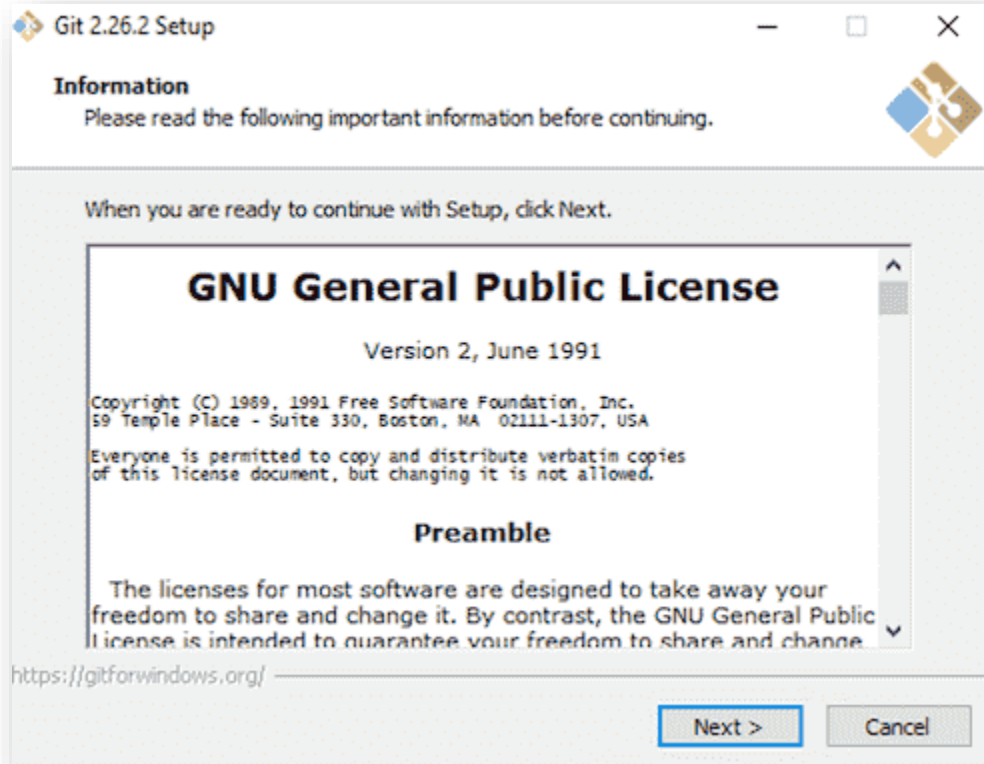

- [Git CLI](#) is the command line interface that used for cloning and interacting with git repositories

Download

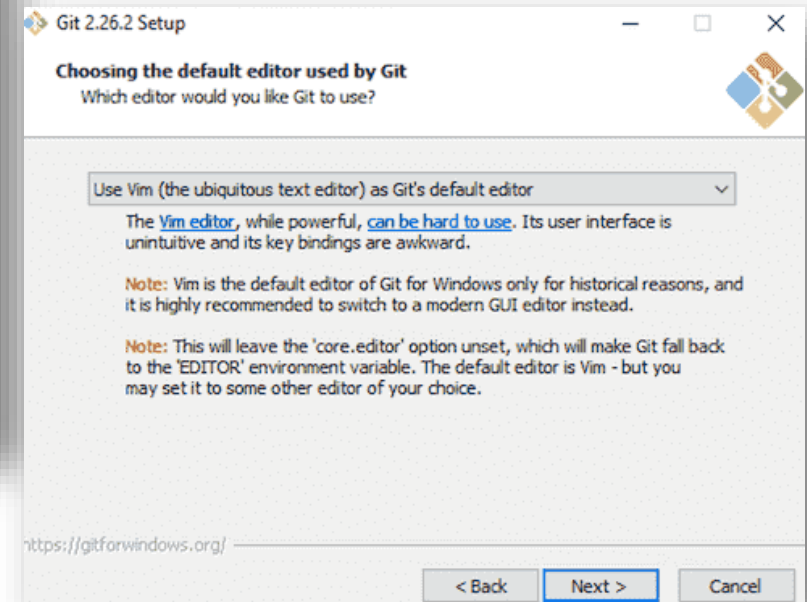

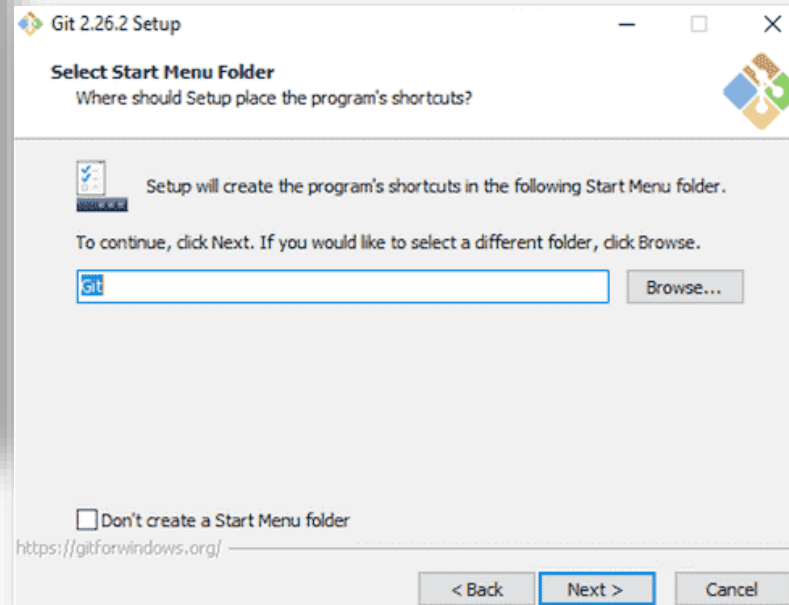

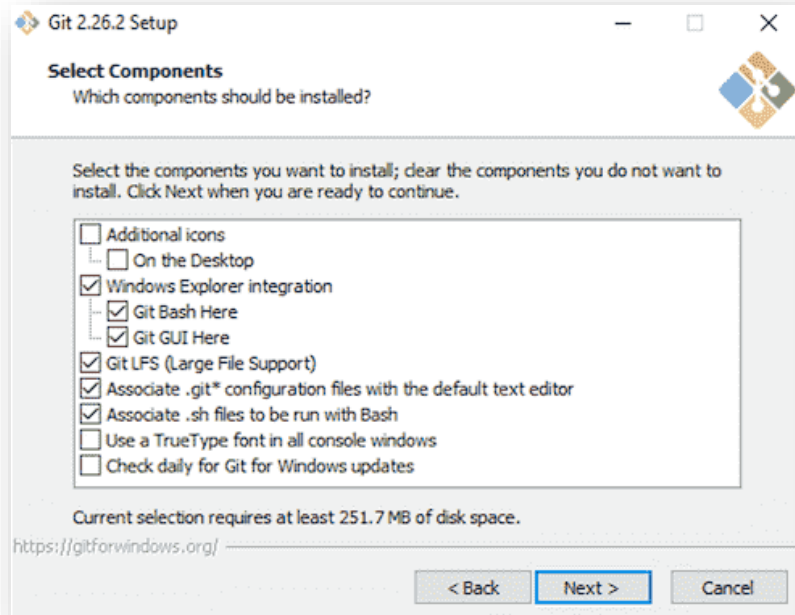

Git CLI from <https://git-scm.com/downloads>

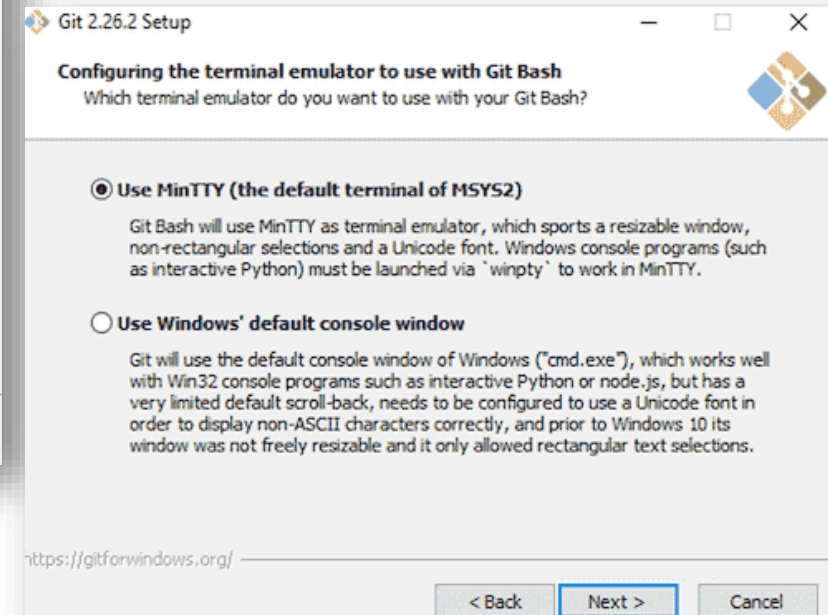

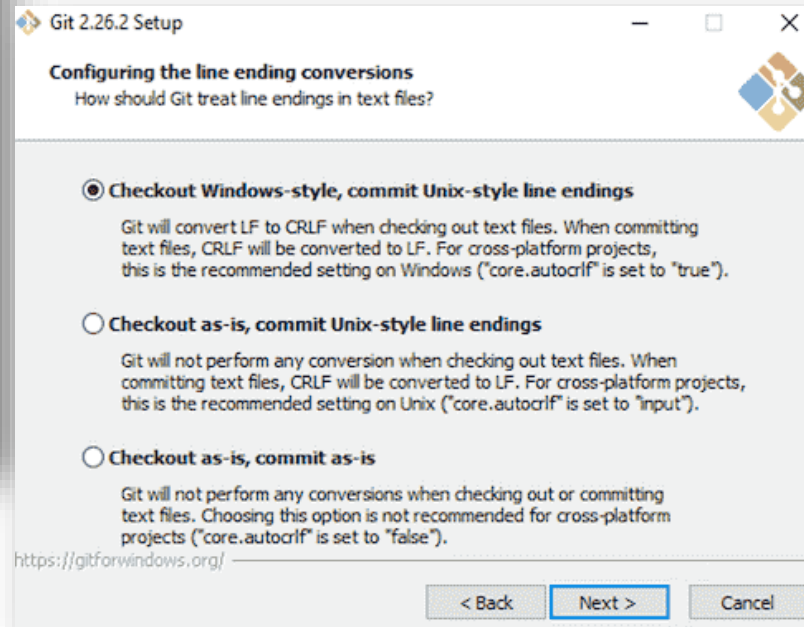

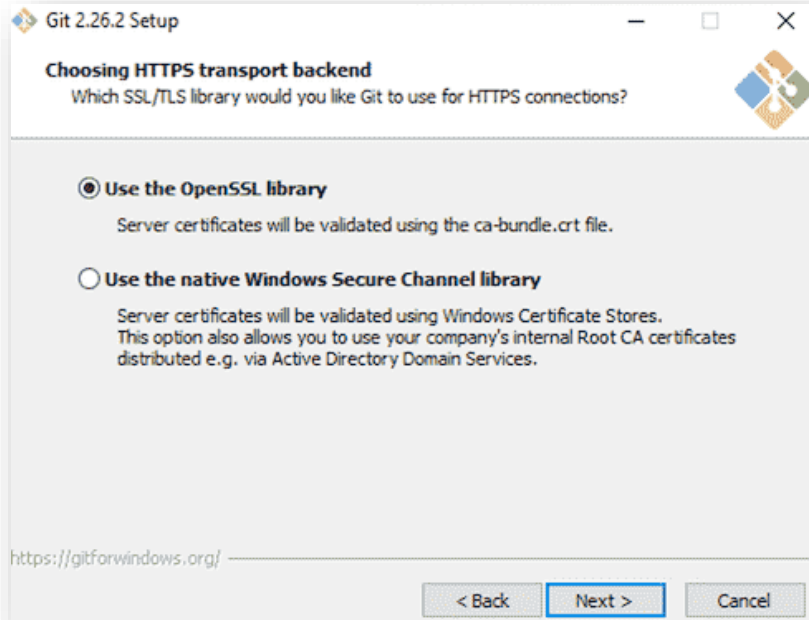

Install Git CLI

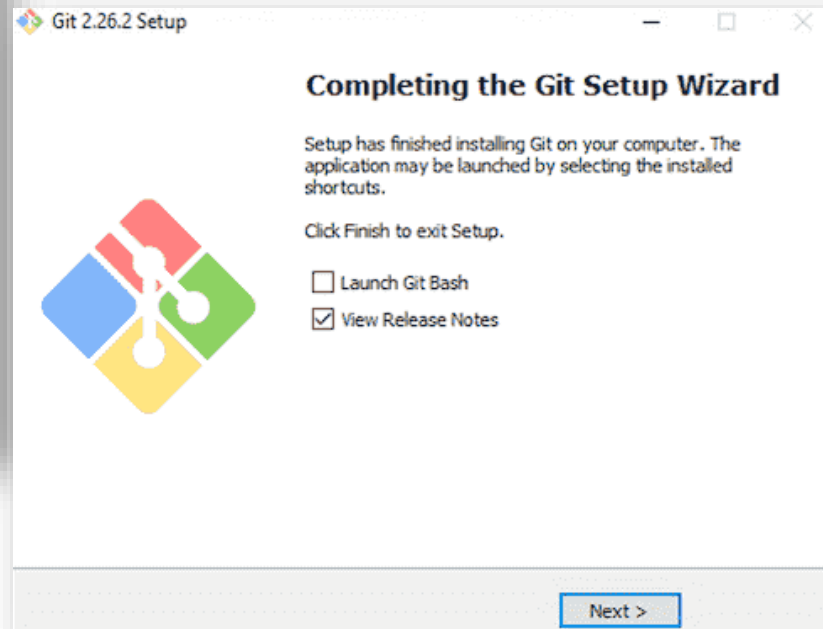

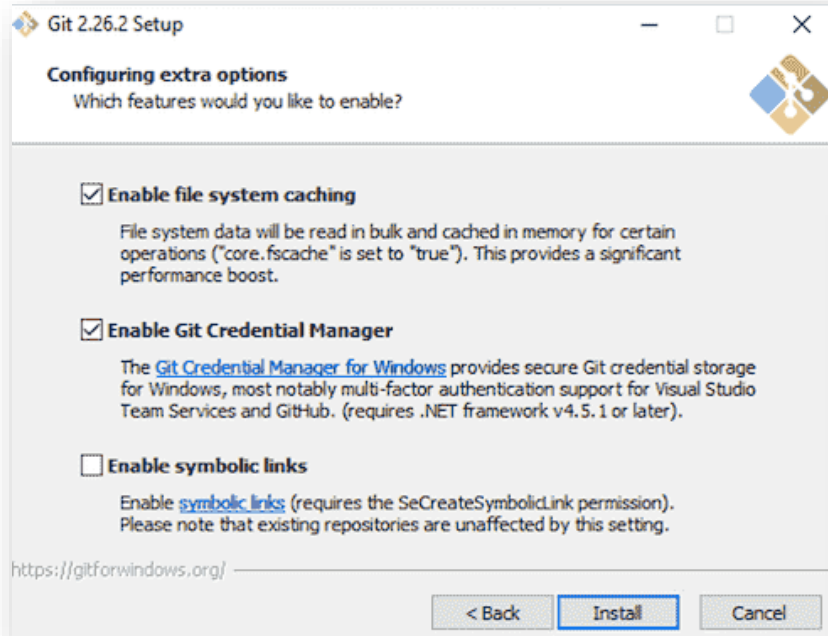

Install Git CLI

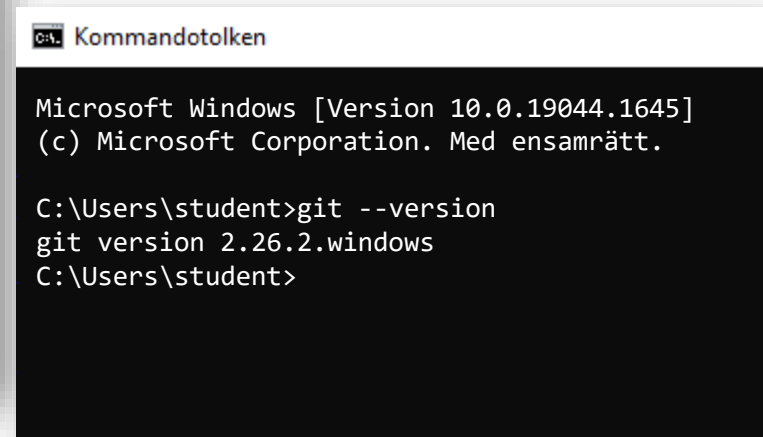

Install Git CLI

Install Git CLI

Test Git CLI: *git --version*

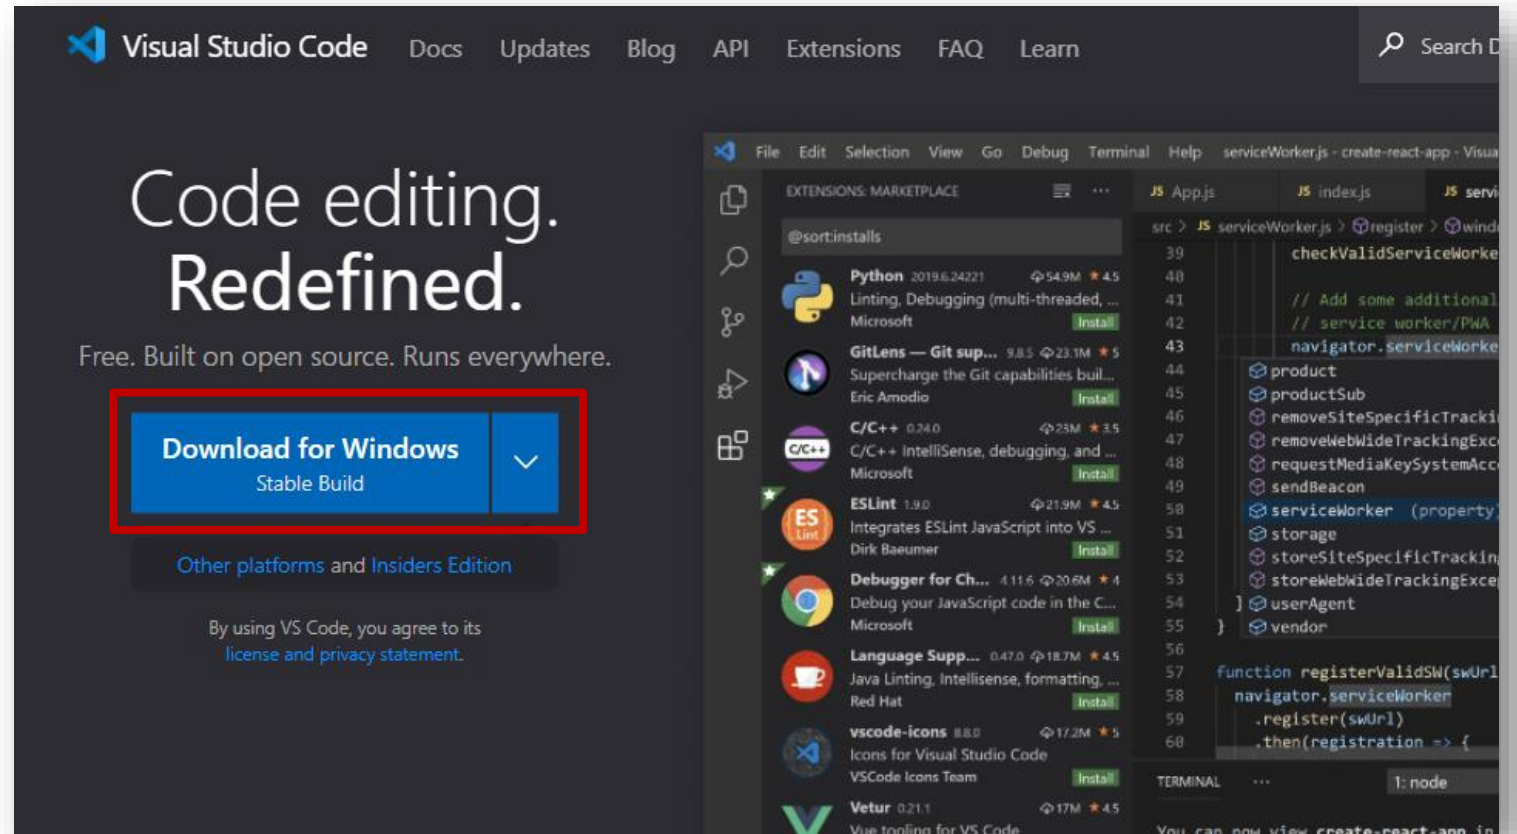

Install Visual Studio Code

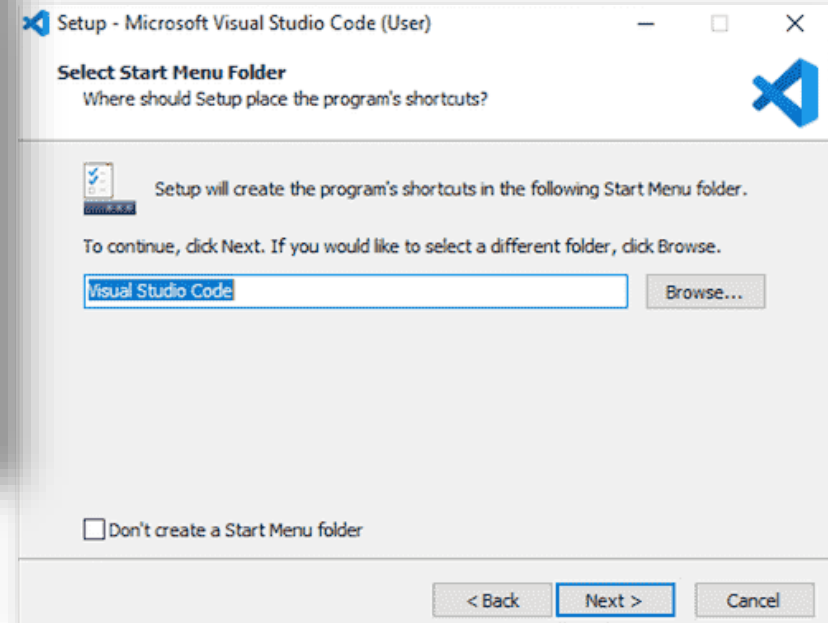

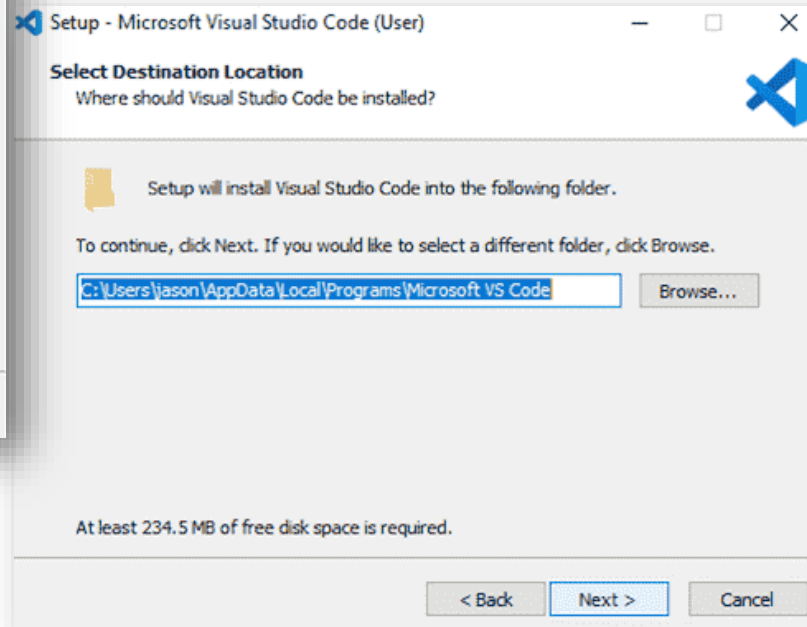

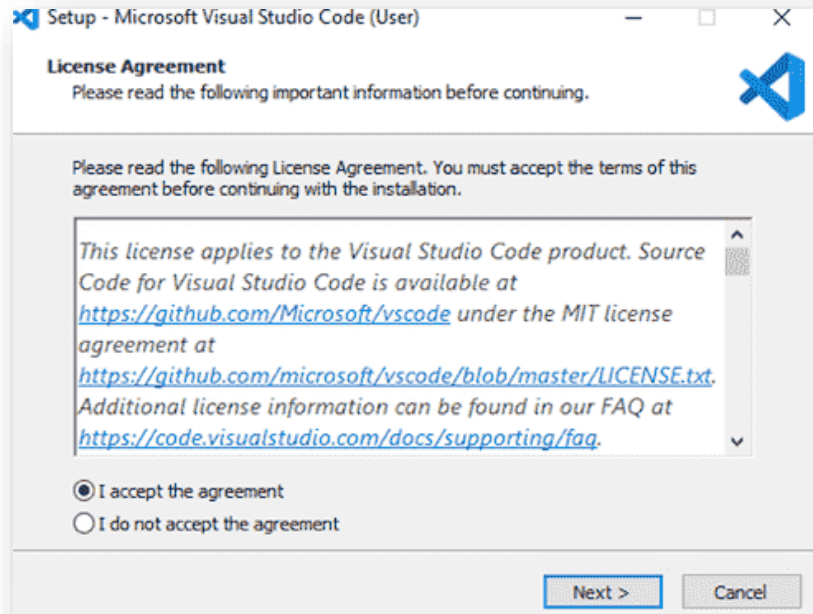

- Visual Studio Code is a free code editor that runs on Windows, Mac and Linux.

Download VS Code

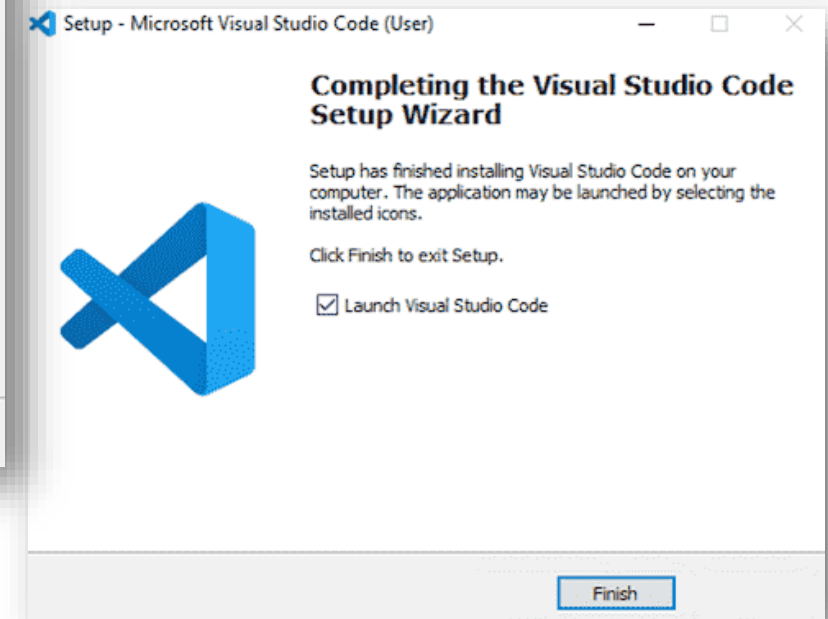

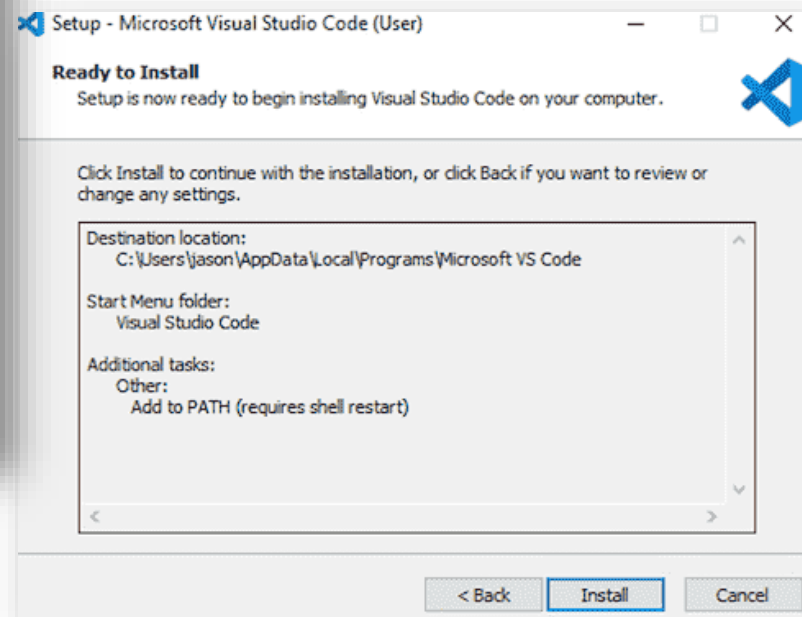

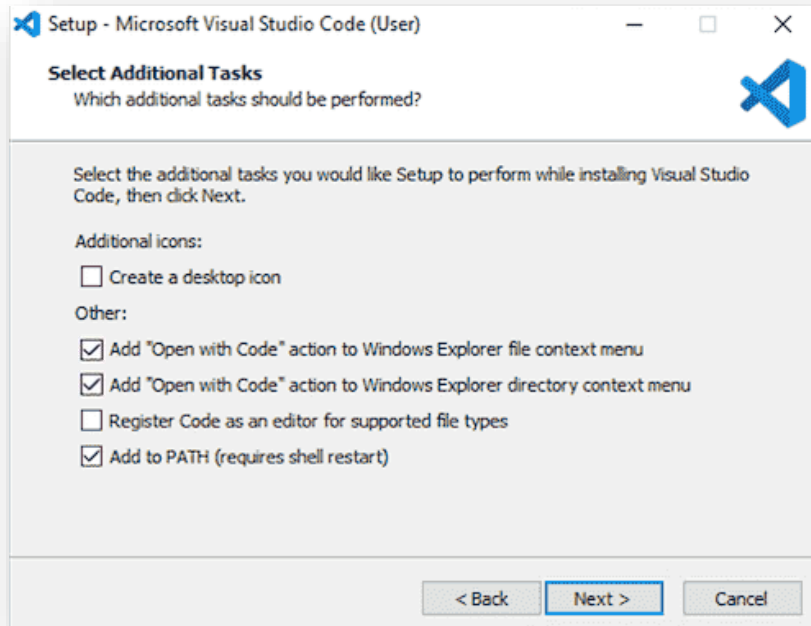

<https://code.visualstudio.com/>

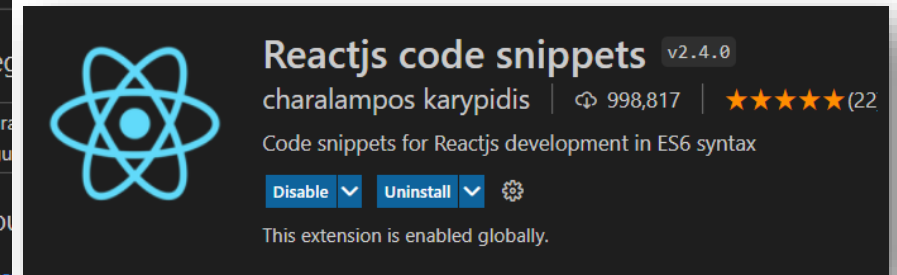

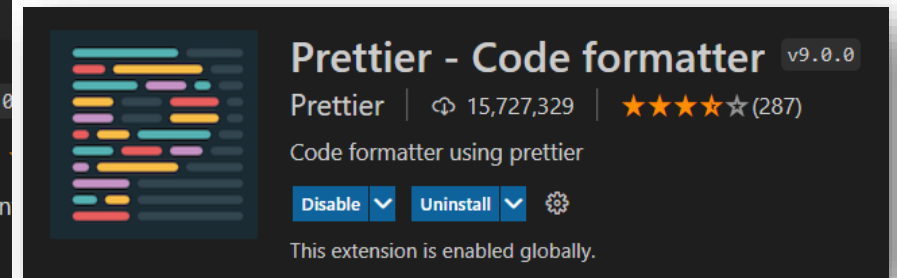

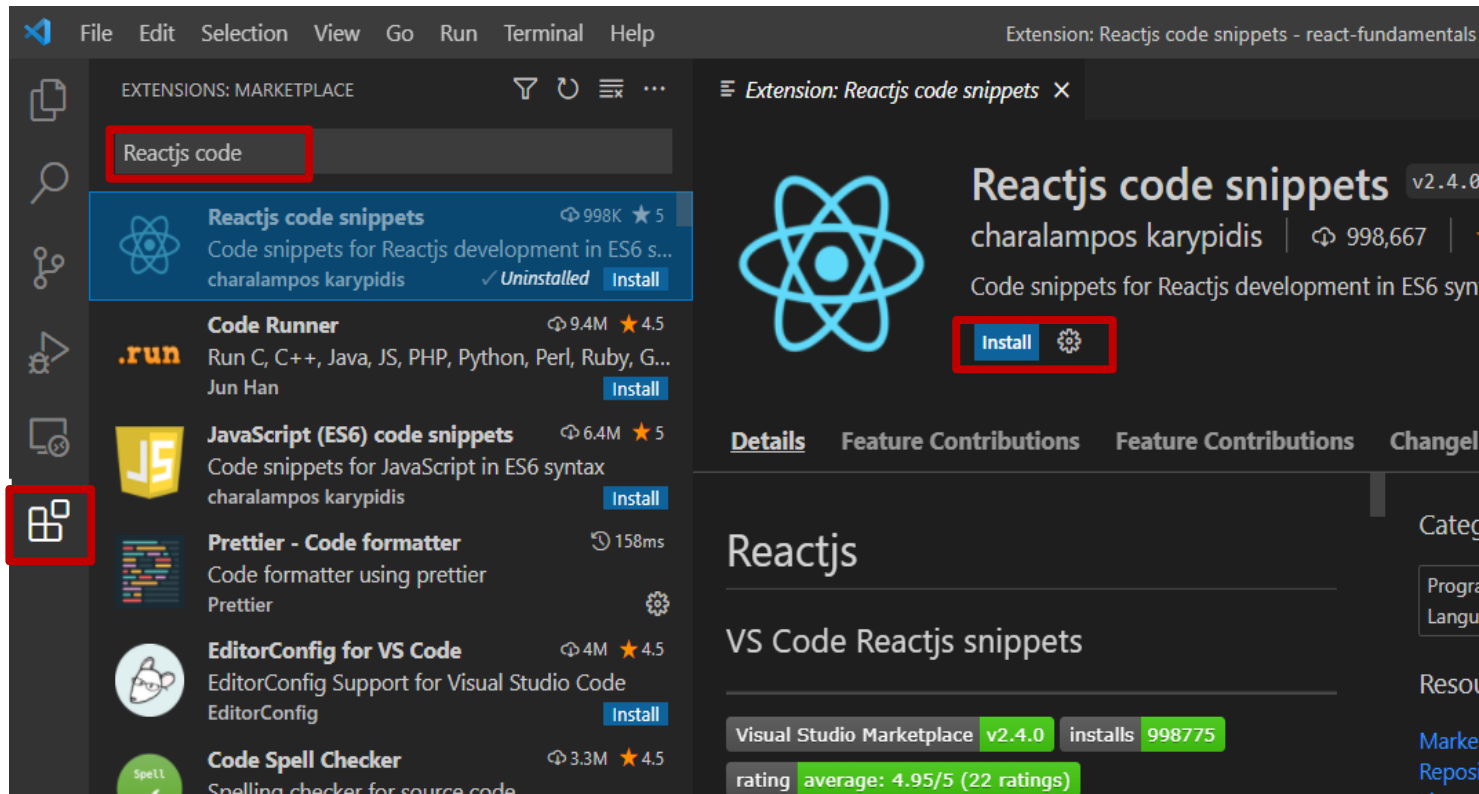

Install Visual Studio Code

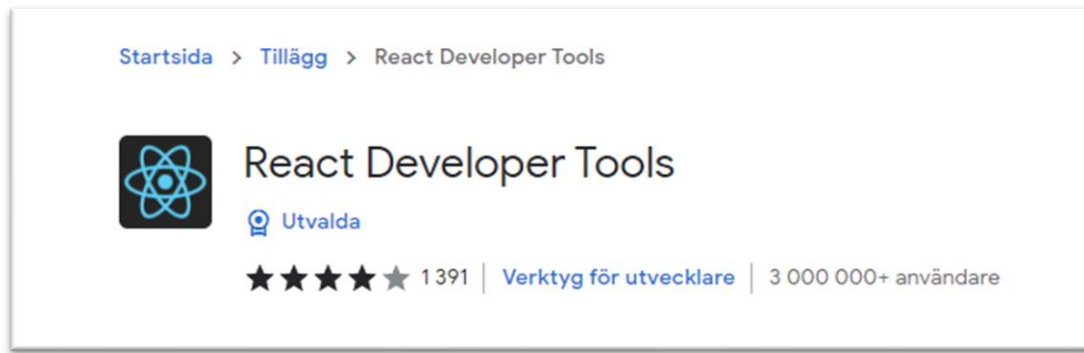

Install Visual Studio Code

VS Code Extensions for React Developers

Browser Extension for React Developers

Chrome Browser Link: [react-developer-tools](https://chrome.google.com/webstore/detail/react-developer-tools/fmkadpghodbcfhjllpgkdbgjcklfdjmd)

(Available for more browsers)

Official Code on Github : [react/packages/react-devtools](https://github.com/reactjs/react-devtools)

Create and Run a React App

- [Create React App](#) is a comfortable environment for **learning** and **building** a new React App
- [npx](#) is a package runner tool that comes with npm 5.2+
- [npm](#) is short for **node package manager**, it is a tool to easily install any package through the NPM CLI
- [create-react-app](#) will create the app inside a sandbox directory

```
npx create-react-app my-app  
cd my-app  
npm start
```
